

eRMA v10 has launched.

eRMA v10 is the Enterprise Resiliency platform you wish you had before your last BCM audit or your last performance appraisal. Modern. Reimagined. Not your grandfather's BCM software.

What is new

- One screen that shows what needs attention, by role: Own, Govern or Operate.
- A dependency map that follows people, process, technology, data, facilities and suppliers, up to five levels deep.
- Recovery times calculated from procedures and checked against each recovery-time objective.
- Impact analysis surveys that calculate recovery objectives.
- Scenarios built from the map and brought into an open incident in one step.
- Access enforced per record. Gaps read Unknown. Hidden data reads Restricted.

Checked before it was announced

833 of 833

recovery start times matched the previous eBRP Suite calculation.

Verified on a 217-plan test dataset.

Same answers

as eBRP Suite 9 for process, application and location readiness.

Verified on a test dataset.

One source

behind every number on screen.

Availability

eRMA v10 is launching now. See it live in 20 minutes at <https://www.eBRP.net/demo>.

About eBRP Solutions
